Operating System

- Windows XP embedded-preloaded on FLASH Disk.
- Standard LAN and OPOS Drivers.
- No user setup required to configure O/S or network.

Communications

Networking and PC Interface

Standard– consolidate reports from multiple terminals at store level and deliver to an in-store or remote PC.

Modular System Components– Up to 8 NEC 5000 terminals can be connected.

Communication Control by predetermined direction– items are directed from the terminal to the appropriate prep areas.

Optional Back-Office and Remote File Transfer Via FTP– Reports are "Pushed" via simple file and schedule lists. Back-up files are stored locally until scheduled for deletion. Connects via dial-up, broad band, or LAN via NEC-tested off the shelf router.

Standard Quick Service Features

Customize Screen Layout– flexible choices of Key Size, Shape, Color, Font, or Picture.

PLU Based System– 16-character PLU description; 24-characters on receipt optional; Up to 5 - Price levels per PLU.

Time Clock– Includes a fully functional timekeeping system, accommodating any length payroll period. Each employee can be assigned up to 30 job codes and 60 pay rates. Time data can be edited with appropriate authority and summary information is reported by job.

Order Tracking– advanced drive-through operations, phone in order tracking, queue recall, timing, and automatic station-to-station transfer of orders.

Roll Up Pricing– modifier pricing can roll into main item pricing.

Advanced Auto Combo– can provide Automatic, Subtotal or Manual based on item ordering.

Automatic Price Changes– can make pricing changes automatically.

Price Adjustments– sophisticated coupon and discount features.

Operator Screen– 3 Screen viewing for busy quick service operations or flexible single order window option. Touch-to-Void or Touch-to-Add condiments to main items.

Options

Remote Printer and Color Kitchen Order Processing Monitor– interface standard. Your NEC 5000 system can be configured to work with only printers, only monitors or a combination of printers and monitors.

KVS flexibility– Screen configuration can be controlled at the bump bar. KVS routing can be changed based on busy or slow times from the terminal and the KVS service time report can be printed at the terminal.

Economical Integrated Credit– eliminates separate credit card terminals, duplicate operations and additional printers.

Management Reports

More than 80 clear, concise and detailed reports are easy to balance and easy to read. Reports can be taken individually or set up in a string of reports, activated from a single key location. Reports have filtering capability; reports can also be set up to print unattended at a predetermined time.
